

Instructions for UNBLOCKING Downloaded File Content

Because this is a downloaded file, the new Windows XP service pack 2 security blocks the content until you change the file property through the Properties dialog box. You may be able to open the file but will not be able to properly view the contents.

To open and view the file properly:

1. **Right click** on the **icon** of the **downloaded file**. [In this example, we have downloaded the Digital Electronics file.]
2. **Select Properties** from the menu. (see bottom of list)
3. Be sure you are looking at the **General** Tab. (find tab across top)
4. In the Properties dialog box of the downloaded file there is a security section at the bottom of the General tab warning that this file came from another computer and could pose a threat.
5. **Click Unblock**
6. **Click Apply** (bottom right)
7. **Click OK** (bottom left)
8. **Double Click** the icon to open the file and view.
